System overview

Before:

Employee from the MAS holdings, from the factory operates a pc (computer) which has audio tracks that should hear for all machine operators.....etc at exact time.

This is done by an employee who working in a line that proceeding garments manufacturing.

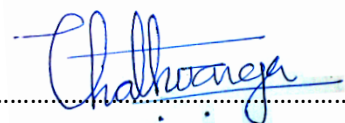

After:

Someone has to schedule the tracks to play and the exact time that should play. Then the software will do everything no one not to be worry.

As well as if anyone wants to play a playlist then he add the media and play them. Any software will pause playing other tracks and play the scheduled tracks without interfering each other.
